📄 summary.md

I focus on backend development and the full path from data model to deploy: Django services and their API layer, PostgreSQL and Redis, queue-based background processing, containerised environments, Terraform-managed servers and zero-downtime CI/CD. Maintainer of multiple open-source packages published on PyPI. Certified in penetration testing, with a security-first approach to hardening and administering Unix systems. Working as software architect in logistics and as CTO shaping technical direction across innovation projects.

📁 skillset.json

"backend"

Python · Django & ORM · DRF / Django Ninja · FastAPI · Celery / RQ · htmx · Shell scripting

"databases"

PostgreSQL · Redis · MongoDB · Oracle PL/SQL · MySQL · query & index optimisation

"devops"

Docker · LXC · CI/CD pipelines · zero-downtime deploys · Elastic stack · Prometheus · Grafana · Sentry

"infrastructure"

Terraform / IaC · cloud providers · Nginx & proxies · load balancing · Linux administration · backups

"security"

Penetration testing · security analysis · OAuth & JWT · hardened Unix systems · backups & recovery

"frontend"

TypeScript · Vue.js & Nuxt · Tailwind CSS · Bootstrap · Figma · wireframes & prototyping

Disciplined

2021 – present

Senior Lead Developer

Transportly s.r.o.

- Software architect for the logistics department's platforms — Django services, third-party carrier and ERP API integrations, event-driven background processing.
- Scrum team lead: sprint planning, code review standards, technical mentoring.

Django REST APIs PostgreSQL Celery Scrum

2017 – present

Chief Technology Officer

SWIDA Innovative s.r.o.

- Own the company's technical vision and every layer of technology delivery, from stack choices to deployment topology.
- Set strategic direction and growth objectives together with the leadership team.

Tech strategy Architecture Team leadership

2012 – present

CEO & Software Developer

Pragmatic Mates s.r.o.

- Custom software for clients across industries: tailor-made web applications, internal tools and automation for long-term accounts.
- Author and maintainer of the PragmaticMates open-source Django suite — invoicing, notifications, exports, auditing, security — published to PyPI.

Django htmx Docker CI/CD Open source

2019 – 2020

Software Developer

SODONBOS s.r.o.

- Contracted to implement a bank payment gateway integration in Python, under the bank's security and audit requirements.

Python Payments Security

2009 – 2012

ICT System Developer & Network Engineer

E-MAX INTERNET & IT s.r.o.

- Designed networking tools and management systems on Nagios, RADIUS, DHCP, SNMP, mail servers, Apache and Nginx.

Nagios RADIUS SNMP Nginx Linux

2007 – 2009

Web Developer

SITECH

- Built a custom CMS in PHP, MySQL and jQuery; configured and maintained the Apache servers it ran on.
